

REAfinity™ Recombinant Antibodies

The next generation of flow antibodies

REAfinity™ Antibodies are designed with flow cytometry in mind. They offer superior performance as compared to traditional hybridoma-derived monoclonal antibodies thanks to greater levels of purity, a highly optimized and standardized fluorochrome conjugation process, and no background signal.

- One universal isotope reduces the complexity of experimental planning
- Recombinant: high lot-to-lot consistency for

reproducible results

- Mutated Fc region eliminates background signal
- Engineered to outperform all mouse and rat monoclonal antibodies
- Eliminates tedious and costly Fc receptor blocking steps
- Made to meet new reproducibility standards
