Harnessing the power of live cell imaging with the CELLCYTE X

Senior Applications Specialist Jim Engström

CELLINK, Gothenburg, Sweden

Abstract

As research moves more towards high-throughput assays in which large amounts of data needs to be collected and analyzed, the need for live cell imaging technologies that can accommodate this shift becomes more necessary. Simplicity and power becomes important in order to perform large scale imaging experiments, as well as allowing multiple users to run experiments simultaneously. Join senior application specialist Jim Engström for an informative session on the CELLCYTE X live cell imager, speaking on different case studies that demonstrate how this system enables you to draw better conclusions from your assays. Additionally, he will showcase how the intuitive CELLCYTE X Studio software makes it easier to bring workflow efficiency to your lab!
